REPORT
OF THE
BOARD OF ADMINISTRATORS OF THE CHARITY HOSPITAL,
For the Year ending December 31st, 1882.

To His Excellency S. D. McENERY, Governor of the State of Louisiana, Ex-officio
President of the Board of Administrators of the Charity Hospital:

Your Excellency—In submitting the accompanying Annual Reports of the officers of the Charity Hospital, I respectfully call attention to the following matters:

The litigation with the Training School for Nurses has been brought to a satisfactory conclusion.

Up to within the past few months there had been no provision made in this city for the care of sick children. The late Board of Administrators of this institution had made some suggestions on the subject, but nothing had been done to carry these into effect. It is a source of unfeigned pleasure to be able to report that, under the present management, a ward for male children has been opened, with gratifying results. It will doubtless be, to many, a subject of surprise to learn that New Orleans has no Hospital for children. It is earnestly to be hoped that the beginning which has recently been made in our midst, by the creation of the ward alluded to, may develop into lasting results.

Various improvements have been made in the sanitary arrangements of the House, but they are merely mentioned here, owing to their being specifically described elsewhere.

I cannot, however, omit calling your Excellency's attention,

in a special manner, to the importance in a hygienic point of view of the early laying of a sewerage pipe from the Hospital to the river. A memorial on this subject has been presented to the City Council by a special committee of the Board, and I would most respectfully direct notice to the matter, in the hope that State aid will be extended for the speedy prosecution of this work, whose importance cannot be overestimated.

The Hospital Library is deserving of careful protection, and the advantages for study, which it already presents, foreshadow its usefulness in the future to the Resident and Visiting Medical Staff of the institution.

I have the honor of subscribing myself your Excellency's humble and obedient servant,

THOMAS LAYTON, M. D.,

Vice-President.

HOUSE SURGEON'S REPORT.

CHARITY HOSPITAL, }
NEW ORLEANS, December 31st, 1882. }

To the Board of Administrators, Charity Hospital:

Gentlemen—At the close of the year, I have the honor to present the report of your executive officer.

The Clerk's report, herewith submitted, shows the number of patients admitted during the year, 6419. This number exceeds the usual annual admissions, owing to the large number of laborers in the country, rebuilding levees and constructing new lines of railroad; owing, also, to the unusually wide prevalence of the malarial fevers in the inundated districts of the State. More than one-third (1964) of the patients admitted suffered of the malarial fevers. These diseases have yielded well to treatment, and the death-rate of the year, twelve per cent. of the admissions, is the smallest for ten years.

On the 31st of December, 664 patients remain in the Hospital. Of these seventy-three are incurable, comprising the consumptive, deformed, epileptic, paralyzed, aged and infirm. The point may well be raised that these patients are not, strictly speaking, subjects for Hospital treatment. Nothing, however, is gained by discharging such patients, who are homeless and friendless. They wander through the streets of the city until, half starved and ill from exposure, they return more pitiable than ever. As the State makes no other provision for them, it is a charity to keep them, while our room and means permit.

We are organizing more efficiently the out-door clinics for the poor. In these clinics the poor receive medical and sur-

gical treatment every day. Through this gratuitous service on the part of the Medical Staff, the institution extends its charity. Since the first of July, more than 3000 visiting patients have been treated in the out-door clinics. The record of these patients, now preserved for the first time, is herewith submitted. By treating more patients out doors, we have already gained in the Hospital two wards, very much needed—an additional ward for negroes, and a Ward for Boys.

The Venereal Department of the house has been reduced, in order to make room for a surgical ward for negroes. The venereal diseases have occupied more space than really required for subjects deserving charity.

The Visiting Oculists, by treating most of the eye and ear diseases in the out Eye and Ear Clinic, have allowed us to convert one of the old eye wards into a ward for boys.

For many reasons our little patients (boys and girls and children), should be to themselves. The opening of a Boys' Ward is the initiative step in this direction. Girls and children, under five years of age, are now scattered over the Female Department to fill up the chinks and corners. A separate department for children is a pressing necessity in the Hospital.

The Female Department of the Hospital is crowded, patients always sleeping on the floor. There is only one ward for colored women, and all diseases, surgical, obstetrical, medical and gynæcological, are thus grouped together. In the white female wards medical and gynæcological cases are associated. These arrangements are improvised in our necessity. More wards are required for women to relieve their crowded apartments, and allow the classification of patients in separate wards, according to their diseases.

Whenever the resources of the Hospital will permit, the erection of a House for Women and Children is strongly recommended.

The suggestion to utilize for this purpose, or for any other purpose, in connection with the Hospital, the building of the School of Medicine, across the street, is now wholly impracticable. The cost of altering and fitting this building, unsuitable by construction for hospital purposes, would exceed the original purchase price (\$13,500). And, after all this, the expense of maintaining a separate domestic and medical service would be out of proportion to the number of patients to be cared for. It is respectfully recommended that this building be resold, if possible, and the proceeds expended in building, *upon the Hospital grounds*, a House for Women and Children. It is better that all departments of the Hospital should be upon the present site, under the immediate supervision of one management.

In the main building of the Hospital two improvements are necessary: (1). A passenger elevator; (2). An improved system of ventilation. The importance of the latter is emphasized. Even in the absence of means to execute, it is well to discuss plans for some future day. The house, now heated by steam, is much more comfortable to the inmates; but the heated air should have freer escape. To improve the ventilation of the house would be to increase its capacity.

The sanitary condition of the Hospital premises has been improved by grading and draining the grounds.

The five (5) new cisterns, capacity approximating 100,000 gallons, recently added to the clear water supply of the premises, help the cause of cleanliness.

However, the sanitary condition of the Hospital and its surroundings will never be satisfactory until the sewer pipe is laid from the vaults to the river, as now advised and urged by your Special Committee.

The disposition of the Board to promote the advancement of medical work in the Hospital is fully appreciated. The im-

provement of the Operating Room facilitates the practice of surgery. For the first time, the room is supplied with clear hot and cold water, ready to hand.

The report of the Pathologist is herewith submitted. This department renders valuable assistance to the medical service. It should be fostered, and its medical work encouraged.

Acknowledgments are due to the donors to the Hospital Medical Library, whose names appear in the list herewith submitted.

In conclusion, I beg to report, generally, that the work in the several departments of the medical service has been well done; the domestic departments are in good order; Sisters of Charity are on duty during the night as well as the day; and throughout the house absolute cleanliness prevails. The domestic management of the Hospital deserves the highest commendation.

All of which is respectfully presented by

A. B. MILES,

House Surgeon.

This is the first record preserved of out-door patients. As the record was begun on the 15th of July, it is safe to say that, from the 1st of July to December 31st, 1882, the term of the present administration, more than 3000 visiting patients were treated in the out-door clinics.

A. B. MILES,
House Surgeon.

LIST OF DONORS
TO THE
CHARITY HOSPITAL MEDICAL LIBRARY,
1882.

DR. S. M. BEMISS,
MRS. DR. JAS. L. EGAN,
DR. O. P. LANGWORTHY,
DR. DAVID JAMISON,
DR. A. B. MILES.

PATHOLOGICAL DEPARTMENT.

CHARITY HOSPITAL,
NEW ORLEANS, December 31st, 1882. }

Dr. A. B. MILES, House Surgeon of the Charity Hospital:

Dear Sir—I beg to report the following labors performed in this Department during the year 1882:

Microscopical sections, substantially mounted in Canada balsam, provided with enamel rings and properly labeled.....	423
Pathological preparations, suspended in jars, in Wickersheimer's preserving fluid.....	38
Examined—Specimens of urine for diagnosis.....	1184
Tumor and other miscellaneous specimens.....	60
Made microscopical sections, representing 126 different specimens of organs and tissues.....	2790
Autopsies.....	142

In addition to the above, a number of brains have been collected and preserved for microscopical sections.

The famous so-called *Bacillus Tuberculosis* of Koch has been found in sections of tuberculous lungs, and in the expectorations of tuberculous patients to represent nothing but a fatty crystal; the same has been the case with the famous *Bacillus Lepræ*, in leprous tissues.

The numerous macroscopical and microscopical pathological examinations, mentioned in the regular monthly reports of this year, have not only served to aid in the diagnosis of the great variety of diseases treated in the Hospital, but they have, also, still more aroused and increased the spirit for scientific medical inquiry among the resident students of the institution. While the regular assistant students of this department have acquired a greater and more thorough knowledge

of pathological anatomy, a number of the other resident students, I am happy to say, have also profited by the opportunities offered here, in improving their knowledge in practical pathological anatomy, as well as in the microscopical and chemical examinations of urine and other morbid fluids and secretions. The necessary requisitions for the department have thus far been made with a view to the strictest economy; though there are still needed a number of miscellaneous instruments, and, particularly, more books of reference, to which you will please direct the attention of the Honorable Board of Administrators.

Hoping that the beneficial influence which this department has, during the short time of its existence, already exerted upon the promotion of true medical science in Louisiana, may steadily increase hereafter, I am,

Most respectfully, yours,

H. D. SCHMIDT, M. D.,

Pathologist.

TREASURER'S REPORT.

CHARITY HOSPITAL.)
TREASURER'S OFFICE,)
New Orleans, January 1st, 1883.)

To the President and Board of Administrators:

Gentlemen—The fiscal year of this institution having ended on 31st ultimo, I beg leave to submit the following summary of its financial and general condition :

On the 1st day of July the present Administration assumed charge of the Hospital, and the control and management of its affairs.

During the latter part of June, the following named gentlemen, viz : Dr. Thos. Layton, Messrs. M. D. Lagan, Edwin Marks, P. Buchanan, R. Sinnott, Chas. Lafitte, John T. Gibbons, with Mr. L. C. Jurey absent, and who subsequently resigned, and the vacancy thus created being filled by the appointment of Dr. C. J. Bickham, met in the Treasurer's office, and organized the new Board, by the election of Dr. Thos. Layton as Vice-President, afterwards electing the following-named officers to serve during the pleasure of the Board, viz : House Surgeon, Dr. A. B. Miles ; Assistant House Surgeon, Dr. David Jamison ; Pathologist, Dr. H. D. Schmidt ; Chemist and Druggist, John Johnson ; Engineer, John Ponder ; Clerk, J. C. DeMahy, and Will Steven, Secretary and Treasurer.

I herewith submit the annual account of receipts and disbursements, together with auxiliary statements, to all which reference is made :

During the month of February last the Board of Administrators, then in charge, purchased the building directly opposite

the Hospital on Common street, built for, and for some time occupied by the new School of Medicine, now generally known as the "Garfield School," paying for the same, together with adjoining lots, the sum total of \$13,583 33, and paying for same \$12,382 15 in cash, and assuming the payment of two notes each for the sum of \$583 33, one of which matured and was paid in September last, and the other maturing in September of the present year, which payments appear on the statement rendered. This building is now occupied by the City of New Orleans as a public school, at a rental of \$75 per month, and is likely to continue to be so occupied for the next three months, or possibly longer, unless possession of same should be sooner desired by the Board.

The total revenue thus far received from this source amounts to \$506 25, with \$131 25 due up to 1st of January, 1883, and which amount, it is expected, will be collected from the city in the course of a few days.

During the year 1881, and the early part of the year 1882, about twenty-two hundred dollars (\$2200) of the funds of the Hospital were expended, in connection with the inauguration, equipping and maintenance of a Training School for Nurses, including fifteen months' rental of a building suitable for the purpose.

For some months past a controversy has been pending between the Board of Administrators of the Hospital and the Board of Directors of the Training School, relative to the reimbursement of said amount to the Hospital, and to the possession of certain articles of furniture and household effects, which controversy has, within the past few weeks, been settled by the delivery to the Hospital of the property referred to, valued at about \$600, and the withdrawal of all legal proceedings for some time past pending in the Civil District Court of this parish.

The following material repairs and improvements have recently been made in and to the Hospital and its surroundings, viz:

The cleaning, renovating and painting of the main and auxillary buildings.

In the engine-room one new improved Woodward pump for feeding the boiler.

In the main yard, one pair of Fairbanks' scales for weighing coal and other material received by cart loads; also, six hundred feet of three-inch cast iron pipe, laid underground for the purpose of conveying water from pump to reservoirs.

In addition, the main yard and grounds have been regraded and paved, and all necessary sewer-pipes laid out to the street, thus forming automatic drainage throughout.

Three large gas lamps have been erected in the grounds, which is an improvement much needed, and is a great convenience.

There has also been erected on the premises five large cisterns, with a capacity of nearly one hundred thousand gallons. In the basement or foundation of two of these cisterns very comfortable bath-rooms have been fitted up complete, and the foundation of another has been arranged as a cellar in which to keep butter, lard and such articles.

The Laundry Department has been provided with one pair of new clothes mangles, and one large Shaker washing machine, with a capacity of 3000 pieces per day.

In the main building, the heater for supplying hot water throughout the Hospital has been thoroughly overhauled, a copper worm supplied, and all put in good working condition.

In addition to the heaters formerly in the Hospital, seven thousand feet of steam pipe have been added, so that now a com-

fortable and uniform temperature can be maintained throughout the building in the coldest weather.

The amphitheatre has been thoroughly overhauled, remodeled and improved, supplied with large basins, with pipes conveying hot and cold water, and it is now heated by steam. Altogether, it is well and conveniently arranged, at a total expenditure of about eight hundred and fifty dollars (\$850).

Our principal steam boiler has been in constant use for nearly thirty years. It would be advisable to have it replaced by a new and larger one at an early day.

Radiator screens, six in number, for the steam pipe heaters, while not absolutely necessary, would add very much to the appearance of the halls and passages where the pipes are located as heaters.

All the improvements mentioned have, under the direction of the House Committee, been supervised and attended to by Mr. Ponder, the Engineer of the Hospital, who is entitled to much credit for the expeditious, economical and thoroughly workmanlike manner in which the work has been performed.

Before the next regular meeting of the Board, the grounds, in front and rear of the main buildings, will be lighted by three electric lights, gratuitously placed there by the Brush Electric Light Company, including the necessary poles, etc.

Several improvements are in contemplation, including an improved elevator, to convey patients to the upper stories of the main building.

Drawings and specifications for a complete system of sewerage, to convey the faecal matter to the Mississippi river, are being prepared, so that, when the proper times arrives, the matter may be proceeded with.

It is to be hoped that some provision will be made to increase the accomodations for the demands daily made for

admission, as, at the present time, the want of space is severely felt; it may become necessary to erect a new wing or division, or add another story to the principal building.

I regret that the amount I have reported as received from auctioneers, for tax on sales, is so small. This, however, is accounted for by pending litigation, the nature of which will be found in the report of the Attorney.

All of which is respectfully submitted,

WILL STEVEN,
Secretary and Treasurer.

John Burnside, -	10,000 00	

The sum of one thousand dollars was bequeathed by R. Y. Charnbury,
but owing to litigation connected with the affairs of the estate, the same has
not yet been collected.

Mrs. Cora Livingston Barton, who died some years ago, left to the Hos-
pital the sum of six thousand dollars, to be paid out of a fund to be derived
from the sale of the property No. 751 Broadway, New York, upon the death
of Julia Barton Hunt and the Hon. Carleton Hunt, who, in the meantime,
have the usufruct of said property.

ATTORNEY'S REPORT.

NEW ORLEANS, January 12, 1883.

To the Honorable the Board of Administrators of the Charity Hospital:

Gentlemen—I beg leave to submit the following report: The matter of John P. Davidson et als. vs. M. D. Lagan et als. (Training School for Nurses) has been finally settled by the delivery of the furniture in controversy to the Hospital.

I have recently ascertained that a suit was instituted, in connection with Mr. J. R. Beckwith by the attorney of the previous Board, entitled Wiltz vs. Arbuckle, No. 2629 of the docket of the Civil District Court, for the recovery of one hundred dollars penalty, accruing to the Hospital for the violation of Section No. 408, of the Revised Statutes of the State of Louisiana, by the defendant, the master of the Steamship "Buteshire," in carrying a pilot not duly licensed. The steamship has been sequestered, and a bond for three hundred dollars given for its release, with W. H. Ross, as security. The case is in charge of Mr. Beckwith, and is fixed for trial the sixteenth instant.

The suit of the State of Louisiana vs. C. E. Girardey, to recover the amount of one-half per cent. duty on auction sales, under Sections 145 to 152 of the Revised Statutes, inclusive, relating to auctioneers throughout the State, which was instituted by the Attorney General, has been fixed for trial several times, but its position on the docket has been such that it could not be reached. I had an interview with the Attorney General shortly after the opening of the courts, and before it was first fixed for trial, in reference to it, but he led me to suppose that he was too much occupied with other matters of the State to give it his attention, and that it devolved on me, as the attorney for the

Hospital, to protect its and the State's interest. The case was fixed for trial on Wednesday last, the 10th inst., with a fair prospect of its being reached, and I was fully prepared to try it; but the defendants in the suit desired a continuance for two weeks on account of the sickness of a witness and their lack of preparation. I will state, in this connection, that a partial statement handed me by the Auditor (I had written him for a statement of all delinquent auctioneers throughout the State), containing the names of auctioneers in this city, some being omitted, who have made their returns for the years 1879, 1880, 1881 and 1882, shows that there is due the sum of \$9,679 84, a few of whom have bound themselves to pay in the event of a final decision of the Girardey case in favor of the State.

I have investigated the whole matter carefully and thoroughly, and have come to the conclusion that it has been very much neglected, and that the Hospital has been for a long time deprived of its just dues prescribed by the laws of the State for its maintenance, which laws have grown almost obsolete from the indifference of the officers of the State whose duty was to enforce them.

Respectfully,

JOHN A. GILMORE,

Attorney.
